

Features

- 2-channel isolated barrier
- 24 V DC supply (bus powered)
- Current output up to 750 Ω load
- Low power dissipation

Function

This isolated barrier is used for intrinsic safety applications. It repeats a 4 mA ... 20 mA input signal from a control system to drive I/P converters, valve actuators, and displays located in a hazardous area.

An open field circuit presents a high impedance to the control side to allow alarm conditions to be monitored by control systems.

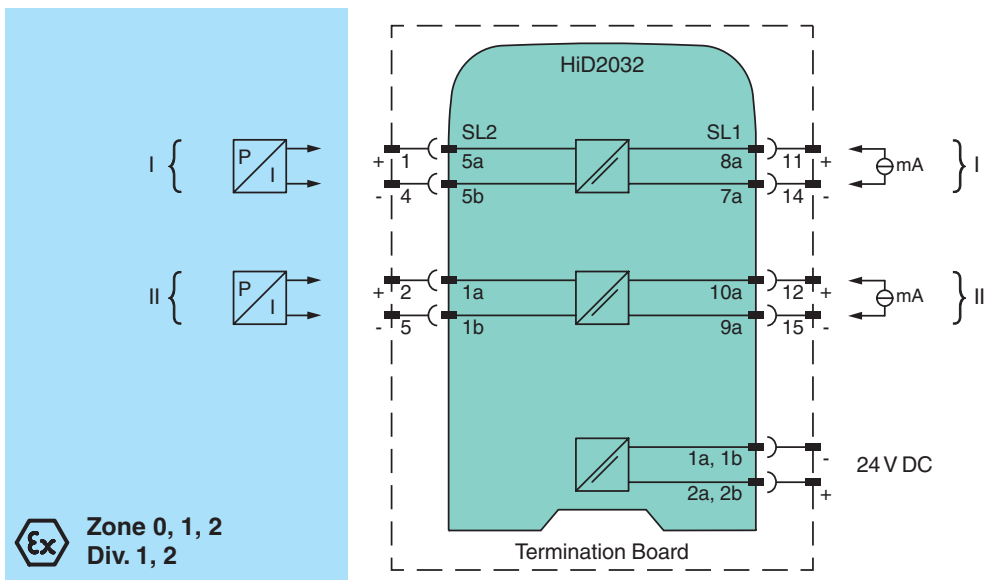

This module mounts on a HiD Termination Board.
